

BIOGRAPHICAL INFORMATION OF THE M.D. /CEO, VIVID VISION GLOBAL RESOURCES

Name: Eng. Michael Friday

D.O.B.: 3rd August, 1979

Qualification: Masters degree in Information Technology from Liverpool University, England

Nationality: Nigerian

Awards:

(1) The 2009 most outstanding youth in invention by the National Youth Council of Nigeria and Federal Ministry of Youth and Sports.

(2) Award for the Development of the Smallest in Size and largest in capacity Flash Storage by the Zhunttai Centre for Science and Technology Development, China.

Inventions: Among his numerous inventions are a flash drive of 16 and 32 gigabytes. He says, “They are the largest in the market today. Besides being immune to virus, it is manufactured from copper wire and has a microchip technology, which makes the storage of data as fast as the speed of light. “The copper wire itself has a strong heat resistance that shields it from any form of external attack.”

There is also the GPRS navigator, a dual purpose electronic product combining the functions of a sophisticated mobile phone and its primary function is to take you to your destination by clicking a button. Friday adds, “You don’t need to pay for subscription, it connects directly to the world satellite global positioning system to give you all the needed details instantly. About 27 satellites are connected to it and it is highly sensitive as it hardly experience fluctuations.”

The climax of his inventions is the 2.4 litre engine car, which is still in production. He says the car, when it is eventually unveiled, will use no fuel. The car, according to Friday, will use just hydraulic brake fluid and engine oil and a day-to-day back up charging of the in-built module to enable it travel for 2,000 miles at the touch of a button.
